

# Devan Kavalchek

**Email:** devan.kavalchek@gmail.com

**Website:** <https://kavalchek.dev>

## Education

**Rochester Institute of Technology**, Rochester, NY

*Bachelor of Science in Software Engineering* (3rd year of 5 year program)

**Dean's List** Spring 2021 to Present

Member of Society of Software Engineers

## Work Experience

**Software Engineer (Co-op) @ Wayfair** | Boston, MA

**July 2022 - Dec 2022**

- Utilized ReactJS, TypeScript and Redux to fix, maintain and update internal marketing tools that are used to design and deliver billions of emails and push notifications every day.
- Resolved the highest number of story points in a single month on the frontend notifications team for the year.
- Improved code health by eliminating hundreds of code smells in the codebase.
- Passed JavaScript and coding standards proficiency assessment.
- Took ownership of OKR objective to migrate API endpoints from PHP Monolith to Java Spring Boot. Migrated existing SQL data into the new database.
- Took complete ownership of a feature from idea to completion. Utilized algorithmic principles to design and implement it independently. Demoed the feature to stakeholders, keeping them updated with the progress. Received overwhelmingly positive feedback from stakeholders upon completion.

**Course Assistant** | Rochester, NY

**Aug 2021 - May 2022**

- Assisted in teaching students the fundamentals of programming including data structures, algorithms, object oriented programming and test driven development using Python and Java.
- Attended classes to assist with in class activities and problem solving activities.
- Graded and provided feedback on over 130 assignments a week.
- Provided 2 hours of virtual mentoring to students each week.
- Upheld responsibilities while maintaining a rigorous academic schedule.

## Highlighted Projects

**froggy.app** | Web Application

**Nov 2022 - Present**

- A link shortener that provides analytics to users via an intuitive and responsive user interface.
- Utilized ReactJS and Redux to build the web application.
- Created and designed a custom component library (lilypad) using ReactJS, TypeScript, SCSS and Storybook. Published to npm to allow anyone to use it in their application.
- Used GitHub and Jira to collaborate and coordinate with my colleague. Created a series of development standards and documentation to stay in sync. Followed a SCRUM development lifecycle to track progress.
- Learned Go and Docker to assist in backend development and unit testing.

**Artist Portfolio** | Web Application

**Dec 2021 - Present**

- Developed and assisted in the design of a portfolio website. Created an admin page that allows the artist to customize the content on the site.
- Displayed the artist's work in a unique, minimalistic and personal way, which helped get their work displayed at an exhibition.
- Used ReactJS, Redux and CSS to develop a responsive web application.
- Utilized Firebase to store image metadata and AWS S3 to upload and store images. Authenticated page CRUD operations using Firebase authentication.

## Programming Languages

JavaScript  
TypeScript  
Java  
SQL  
Python  
Dart  
HTML & CSS  
SCSS

## Frameworks/ Libraries

ReactJS  
Redux  
Flutter  
Spring Boot  
Spark Java  
Flask  
Firebase  
AWS Lambda & S3

## Tools

Git/GitHub  
Command line  
Docker  
Postman  
Storybook  
npm & Yarn  
Vim

## Operating Systems

Windows  
macOS

## Skills

- Software development lifecycle
- Agile development
- Test driven development
- Object oriented programming
- Data structures & algorithms
- Systems design

## Awards

**BrickHack7** - Best Usage of Google Cloud  
**ClayHack 2020** - Best Project Design  
**Meet & Hack 2022** - 2nd Place Community Hack
